Concordance v0.10: The Book-to-Module Map

Tracking document, Project secret3, Rows A and B, August 11, 2026. Supersedes v0.9.

Purpose: one page per part, every chapter's claimed formal anchors against their status, so that any audit can run mechanically. Status vocabulary: delivered (compiled in Proofs.idr or Chiral.idr, part named), sliced (compiled in a dependency slice under the OOM regime), registered (an open agenda line), classical (cited, never claimed as ours), design (true of the framework by construction, stated as such). Module state at this writing: Proofs.idr 3,785 lines through part AC, full verification to part AA, parts AB and AC slice-verified; Chiral.idr 187 lines standalone, fully verified; roughly two dozen working papers. Standing requirement M1: modularization into a package before the next large campaign.

Part One, Form

Chapter one, Two Moves: kStep, sStep, the step relation, traceTurnover; delivered (parts A, Z). Law of Three as narrative, no anchor. Chapter two, Everything from Two: completeness classical (Schoenfinkel to Curry); kTrue, skFalse, pairBeta, pairFst, pairSnd delivered (part M); abs, absCorrect, absGone delivered (part N); skIdentity delivered. Chapter three, The Unreachables: the unreachability theorems delivered (parts D and E); halting rim classical. Chapter four, The Price List: the ledgers, brokenE, formedE, turnoverBalance, stepsNeverMint, dupMass delivered (parts R, Z); Landauer and Bennett classical. Chapter five, The Vessel: the mint law family, kTurnover, sTurnover, valuesUndersaturated, rootStatus delivered (parts Z, AA); sweeps engine-tier, labeled illustration. Chapter six, The Machine That Runs Itself: fondPoint, yKnot, yUnfolds, mirror, omegaCycle delivered; simT with simCorrectJ and simCorrectN delivered; the arrival joint closed whole by P1 and P1b, localConf, newman, gardenSN, gardenConfluence, and gardenUNF all delivered packaged, zero citations on the garden; von Neumann architecture historical.

Part Two, Thought

Chapter seven, The Question: completeness classical; skIdentity, iTyped delivered; the ledger meters delivered; Hempel and the hard problem philosophical citations, no anchor claimed. Chapter eight, The Other Side of the Coin: Frege's two laws as the types of K and S, delivered as iTyped's derivation frame (part Deriv); derivPreserved, derivSteps, bTyped delivered; tTyped with tSteps delivered; peirceNoProof, dneNoProof, matSound delivered; probeCert delivered; Griffin's typing of control classical; the two-chests proof classical folklore. Chapter nine, The Machine Room (unwritten): all anchors delivered per charter, Deriv, iTyped, bTyped, tTyped, derivPreserved, derivSteps, probeCert, the impossibility lemmas, the graded matrix, strong normalization; the or-row delivered as D1, packaged, module Choice, leftTag and rightTag with explicit eliminations. Chapter ten, Thought Unbound (unwritten): Hurlburt, Hadamard, Fedorenko scientific citations; kStepOcc, sStepOcc delivered as the priced structural rules; the linearity ladder delivered; peirceNoProof, dneNoProof delivered; Birkhoff and von Neumann classical; substSteps, absCorrect delivered.

Part Three, Consciousness

Chapter eleven, The Witness (unwritten): the gate design result delivered (simT with the Empty Symbol reading); the rim classical plus the compiled impossibility idiom; purity design with the W3 family delivered, packaged, module Purity, the silence ladder and the two firing bills; no-quoter delivered as W1, packaged, the NoQuoter module in the foundation package, parametric coding, UNF hypothesis-explicit with Church and Rosser cited at exactly that joint; the scheduler design fact.

Chapter twelve, The Receiver (unwritten): provenance delivered as W2, packaged, module Provenance, stepNoMint through custody; registration-costs family delivered as W3, packaged; the two stations, linear against burning, delivered as the typed and linear fragments; the emergence laboratory delivered as the tower results plus simT; The Sudden Spark polemic runs on delivered results only; stochastic recruit delivered as W4, engine tier, W4.idr with its output log, fenced by the fifth criterion. Chapter thirteen, The Unfinished Physics (unwritten): the cut, the interpretations, Bell, no-cloning, Jacobson, the Page curve all classical; no-quoter as cousin registered W1; Church-Rosser as covariance carries upgrade path P1, typed confluence via Newman, strong normalization plus local confluence yielding confluence on the garden, compilable, registered below; the mint resonance delivered (stepsNeverMint) with the cosmological joint left open.

Finale

Chapter fourteen, Spirit, Soul, and Form: no anchors, lineage citations only. Chapter fifteen, The Two Courses: no anchors claimed; the correspondences reference delivered results by name, each already tracked above; the sources named with editions. Chapter sixteen, The Reading: the falsifiability beat references the gate and simT, delivered; Solvay, Malin, Einstein historical; The Infinite Alibi runs on stepsNeverMint, delivered, and the Everett distinction, classical.

Open lines at this writing

M1 modularization, required. W1 delivered, packaged. W2 delivered, packaged. W3 delivered, packaged. W4 delivered, engine tier. Line W complete. P1 and P1b delivered, packaged: the arrival joint compiled end to end, gardenSN by re-proof in module GardenSN, noQuoterGarden closing W1 for typed quoters with nothing classical in the chain. D1 delivered, packaged. C6 through C9 as previously registered. The chiral program CH2 movements one through four, CH3. Nothing in the book's sixteen chapters claims an anchor that is neither delivered, sliced, registered, classical, nor design; this concordance is the audit trail for that sentence.
